

PROTECTIVE WINDOWS DESIGNED TO SAVE LIVES

Before

After

Before

After

The realization of threats to military and other government buildings has given birth to a new generation of life-saving windows and doors by Graham Architectural Products.

Advanced blast protection windows.

Graham now manufactures a full line of commercial aluminum products that meet up to GSA Level C & D certification test criteria for bomb blast threats to human life. Operable units including casement, sliding, and double-hung windows are designed to function after the blast. Graham uses trim-and-clip and receptor anchoring systems. Blast mitigation windows for historical renovation projects are a Graham specialty.

- Custom blast mitigation windows for new construction and retrofit
- Choice of frame depths: 2-1/4", 3-1/2", and 4"
- Choice of 1" special glazing systems

Ballistic-resistant windows. Graham heavy commercial windows were recently tested to UL752 Level III ballistic standard by an independent laboratory. Nine 44-magnum bullets were fired into frame and glass without penetration damage. Though they boast outstanding hand gun deterrence capability, these windows and doors don't sacrifice the architectural beauty and integrity of all standard Graham products.
