

SL SINGLE-LEVER OPERATOR

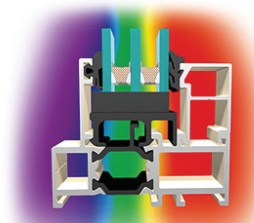

GRAHAM'S ADA WINDOW SOLUTION

Graham's SL Single-Lever-Operator window is an out-swing casement with unique hardware designed to use minimal operating force and limited motion requirements like those specified by AAMA 513-12 (less than 5 lbs. operational force).

The single-point, multi-functioning handle allows locking, unlocking, opening and closing, with minimal force, while also functioning as a limited opening device. This window option is the perfect choice for operable windows in all spaces, especially when accessibility is required.

Like all of the GT6 Series, the SL windows features a polyamide strut thermal break system for superior U-Values, Euro-Groove design for hardware versatility, and Dual color (two-tone) capability.
